

Accuracy in Overseeding

The Verti-Seed, SpeedSeed and Overseeder are the most accurate overseeders on the market. This guarantees maximum germination and no spillage of seed.

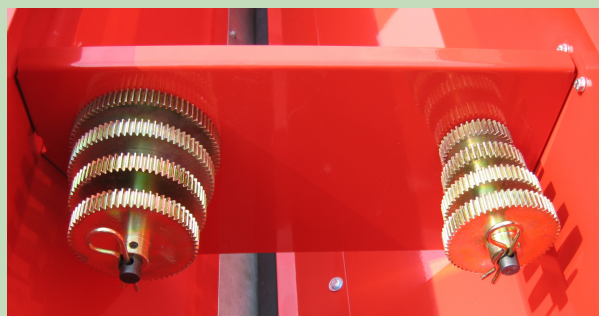

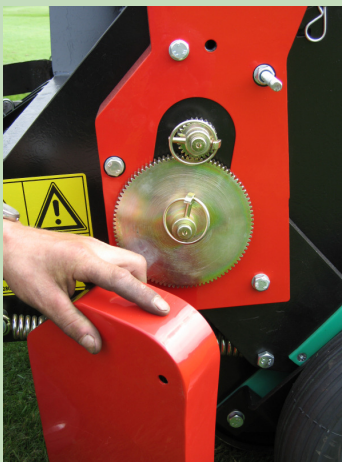

Rubber Roller:

The rubber roller inside the hopper is elastic and seals closely against the hopper sides. Even extremely fine types of seed, like agrostis, are only released once the roller is turning. The gap can be increased stepless if the release of large quantities of seed is required.

Spike Scraper SpeedSeed:

An optional scraper is available for the SpeedSeed to keep the spikes clean from soil.

Exact dosing rates:

Dosing rates can be accurately set for any seed species and for any mix of different species. A total number of 10 chainwheels (Verti-Seed: 8) can be configured into 20 positions (Verti-Seed 16). The dosification can be fine tuned for any seed type and mix. For extreme low seed quantities the optional Fine Dosing Kit (for Verti-Seed only) ensures a minimal spillage of seed. Up to as fine as 2 grms/m² (0.4 lbs/1000 sq.ft) is possible.

Breaking barriers to better turf.
